

WASTE DISCHARGE REQUIREMENTS FOR MUSCO FAMILY OLIVE COMPANY AND THE STUDLEY COMPANY, CLASS II SURFACE IMPOUNDMENTS, SAN JOAQUIN COUNTY

Musco Family Olive Company operates an olive packing plant on property owned by the Studley Company. Class II Surface Impoundments receive an average of 28,700 gallons per day (gpd) (10,476,500 million gallons per year) of process wastewater (designated waste) referred to as Ponds A and B waste management units. These revised Waste Discharge Requirements (WDRs) update older WDRs by describing the installation of additional monitoring wells, changes in the unsaturated zone monitoring, inspection of the leachate collection systems, and the land application system covered under separate WDRs. These revised WDRs permit continued operation of the facility Class II surface impoundments in compliance with Title 27 California Code of Regulations. (KAS)
